

VERTEX BLIND SYSTEM WITH DOUBLE WAND OPERATION

KEY BENEFITS

- Ideal for large windows, bi-fold or patio doors.
- Each louvre hangs independently, which enables easy access to outside spaces by being able to walk in-between each louvre.

Three versatile levels of privacy and shading: “sheer view” allows light to filter in, “closed view” gives complete privacy or “clear view” enables clear outside views when the louvres are stacked to the side.

- The Blindsight vertical headrail has an attractive curved profile, and is available in 6 colour options: White (as standard), Brushed Steel, Graphite, Piano Black, Brown, Champagne Gold.
- 5m length tracks available for wider windows and doors.
- Can be used in large spaces, such as hotels, restaurants, or offices as room dividers.
- Child safe with wand operation.
- Motorised Headrail “tilt only” available (not available with Fascia option) with maximum track width being 3m.

HARDWARE SPECIFICATION

Blindtex Vertex Blind System

Vertex Blinds are manufactured using the Blindtex Slimline Vogue System with aluminium headrail 38.5mm x 28mm and include carrier trucks with UV stabilised self-aligning hooks.

Operation is by tilt and draw monocommand wand control, cord & No 6 size chain or motorisation.

The tracks are smooth running and robust. The components are made from aluminium, prime plastic or stainless steel and minimise damage caused by operator misuse.

The brackets are made from

mild steel, zinc plated and powder coated and are suitable for top or face fixing.

A unique and optional 80mm fascia can be added, which offers the option of a matching fabric profile.

Headrail

The headrail extrusion and fascia are made from prime aluminium and powder coated to make it corrosion resistant. Brackets are manufactured with a strengthening crease for increased strength and safety.

Carrier Trucks

Manufactured using prime

quality plastic materials, this ensures a positive and smooth operation while providing durability and protection from embrittlement and UV rays. Louvre hangers are manufactured using an optically transparent polycarbonate.

The gears in the carrier trucks that rotate the louvres are self-aligning with limit stops. This allows louvre rotation to 185°, enabling efficient closure without strain on the mechanism.

The spacing between the carrier trucks is controlled by high-grade stainless steel spacer links. The standard spacing is 103mm louvres.
